COURSE OVERVIEW DE0171-4D PTA/RTA Foundation

Course Title
PTA/RTA Foundation

Course Reference DE0171-4D

Course Duration/Credits
Four days/2.4 CEUs/2.4 PDHs

Course Date/Venue

Session(s)	Date	Venue
1	August 26-29, 2024	Jubail Hall, Signature Al Khobar Hotel, Al Khobar, KSA
2	November 25-28, 2024	UAE Boardroom 1, Elite Byblos Hotel Al Barsha, Sheikh Zayed Road, Dubai, UAE

Course Description

This practical and highly-interactive course includes real-life case studies and exercises where participants will be engaged in a series of interactive small groups and class workshops.

This course is designed to provide participants with a basic and up-to-date overview of pressure transient analysis/rate transient analysis (PTA/RTA). It covers the basic theory of diffusion PTA/RTA; the basic principles and terminology governing both methods; the Darcy's law and the equation of state leading to the diffusivity equation; the principle of superposition, infinite-acting radial flow, wellbore storage and skin and pseudo-steady state; the PTA methodology from the simple straight line horner to the current model-on-the-fly bourdet derivative; the quality control process before making an analysis; and the basic Saphir features including the interpretation path of load, edit, synchronizing, model, classical methods, derivative and the application to field examples.

Further, the course will also discuss the well models comprising of vertical wells, skin, finite/infinite conductivity fractures, limited entry and horizontal wells; the reservoir models covering homogenous and heterogeneous models behavior including 2Φ, 2κ and composite; the boundary models that include single limit, intersecting, parallel faults and closed system; and the typical errors encountered when diagnosing a boundary effect with an illustration of superposition effects and the influence of production duration on the analysis.

During this interactive course, participants will learn the use of pseudo pressures and multiple period analysis for rate dependant skin; the IPR AOF options in Saphir and the connection to the amethyste WPA module; the test objectives and designing a test to achieve them; the methodology from the basic empirical methods including Arps and Fetkovich to the current modern Blasingame, material balance and loglog diagnostic plots; the basic Topaze features including the interpretation path of load, edit, model, p(q), q(p), fast model and application to field examples; the principle of the linear (single phase) numerical model and how to build a model; and the well type, composite zones, faults and thickness.

Course Objectives

Upon the successful completion of this course, each participant will be able to:-

- Apply and gain a basic knowledge on pressure transient analysis/rate transient analysis (PTA/RTA)
- Discuss the basic theory of diffusion PTA/RTA as well as the basic principles and terminology governing both methods
- Describe Darcy's law and the equation of state leading to the diffusivity equation
- Explain the principle of superposition, infinite-acting radial flow, wellbore storage and skin and pseudo-steady state
- Carryout PTA methodology from the simple straight line horner to the current model-on-the-fly bourdet derivative
- Apply quality control process before making an analysis as well as discuss the basic Saphir features including the interpretation path of load, edit, synchronizing, model, classical methods, the derivative and the application to field examples
- Identify well models comprising of vertical wells, skin, finite/infinite conductivity fractures, limited entry and horizontal wells
- Describe reservoir models covering homogenous and heterogeneous models behavior including 2Φ, 2κ and composite
- Recognize boundary models that include single limit, intersecting, parallel faults and closed system
- Determine the typical errors encountered when diagnosing a boundary effect with an illustration of superposition effects and the influence of production duration on the analysis
- Use pseudopressures and multiple period analysis for rate dependant skin
- Explain the IPR AOF options in Saphir and the connection to the amethyste WPA module
- Discuss test objectives and design a test to achieve them
- Apply methodology from the basic empirical methods including Arps and Fetkovich to the current modern Blasingame, material balance and loglog diagnostic plots
- Recognize the basic Topaze features including the interpretation path of load, edit, model, p(q), q(p), fast model and application to field examples
- Discuss the principle of the linear (single phase) numerical model and how to build a model
- Define the well type and identify composite zones, faults and thickness

Exclusive Smart Training Kit - H-STK®

Participants of this course will receive the exclusive "Haward Smart Training Kit" (**H-STK**[®]). The **H-STK**[®] consists of a comprehensive set of technical content which includes **electronic version** of the course materials conveniently saved in a **Tablet PC**.

Who Should Attend

This course provides a basic and up-to-date overview of pressure/rate transient analysis for production engineers, reservoir engineers, production, operations, petroleum and reservoir engineers, geologists, analysts field personnel, senior and field supervisors with an engineering background and analysts involved with the design, supervision and interpretation of well tests who need to obtain a better understanding of the advanced practices used in pressure transient tests and its advanced interpretation models.

Training Methodology

All our Courses are including **Hands-on Practical Sessions** using equipment, State-of-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

30% Lectures

20% Practical Workshops & Work Presentations

30% Hands-on Practical Exercises & Case Studies

20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

Course Fee

US\$ 6,750 per Delegate + **VAT**. This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.

Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

Certificate Accreditations

Certificates are accredited by the following international accreditation organizations: -

The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the ANSI/IACET 2018-1 Standard which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the ANSI/IACET 2018-1 Standard.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking Continuing Education Units (CEUs) in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award 2.4 CEUs (Continuing Education Units) or 24 PDHs (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

British Accreditation Council (BAC)

Haward Technology is accredited by the British Accreditation Council for Independent Further and Higher Education as an International Centre. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

Dr. Saad Aljzwe, PhD, MEng, MSc, BSc, is a Senior Petroleum & Reservoir Engineer with over 25 years of practical and academic experience in the areas of Petroleum Economic Analysis, **Economic** Evaluation, **Petroleum Risk** Analysis & Decision Making, Oil Agreement, Exploration & Production Sharing Agreements, Multidisciplinary Research, Economics & Property Evaluation, Conventional & Unconventional Oil & Gas Reserves Estimation,

Reservoir Management, Reservoir Engineering, Reservoir Performance Analysis, Oil Fields Subsurface Assessment & Forecasting, Casing Design, Drilling & Workover, PVT & Core Analysis, Production Operations, EOR/IOR, Field Development Design & Evaluation, Miscible Gas Injection (CO2 Injection) Design & Evaluation, Special Core Analysis & Formation Evaluation, EOR-CO2 Injection, Remaining Gas in Place Estimation, Material Balance Method, Computerized Monitoring & Processing System Design, Magnetic Field Controlling, Comparative Risk Evaluation & Sensitivity Analysis, Critical Production Rate for Bottom Water Coning in the Majed (EE-Pool) Reservoir, Oil Pipeline Black Powder Removal, Oil Field Water Shutoff Treatment Methods, Water-Based Mud Rheological & Fluid Loss Control, Empirical Equation, Water-Flooding Performance, Sandstone Reservoirs, Reservoir Fluid Properties, Mathematical Modelling, Directional Permeability Anisotropy, Drilling Operational Efficiency & Well Cost Reduction, Infill Drilling Program, Drilling Efficiency and Ultra-mud System Optimization. Further, he is also well-versed in various petroleum software such as the MBAL (Reservoir Engineering Toolkit), KAPPA-Saphir (Well Testing), KAPPA-Rubis (Reservoir Simulation), CMG (Reservoir Simulation), Merak Peep (Economic Evaluation and Production Decline Analysis) and **Monte Carlo** Simulation.

During Dr. Saad's career, he gained his thorough practical experience through several challenging positions such as the Senior Lecturer, Head of Petroleum Engineering Department, Head of Chemical Engineering Department, Head of the Union of Faculty Members, Assistant Professor, Teaching Assistant, Researcher and Academic Coordinator from various international well-renowned companies such as the University of Wyoming, Colorado School of Mines, American University of Ras Al Khaimah, Australian College of Kuwait, Sirt University and Bright Star University of Technology.

Dr. Saad has a PhD and Master degree in Petroleum Engineering from the University of Wyoming and Colorado School of Mines, USA, respectively as well as Master degrees in Petroleum Economics & Management and Reservoir Geosciences & Engineering from the Instituit Francias du Petrole, France and a Bachelor degree in Petroleum Engineering. Further, he is a Certified Instructor/Trainer, a Certified Internal Verifier/Assessor/Trainer by the Institute of Leadership & Management (ILM) and a member of the American Society of Petroleum Engineering (SPE), Society of Petroleum Resources Economists (SPRE), Association of Professional Engineering of Libya, Libyan Society of Earth Science and the Environment Friends Association of Libya. Moreover, he is an author/co-author and published various research papers in local and international scientific journals and conferences. He has further delivered numerous trainings, courses, workshops, seminars and conferences globally.

Course Program

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1

Duy 1		
0730 - 0800	Registration & Coffee	
0800 - 0815	Welcome & Introduction	
0815 - 0830	PRE-TEST	
0830 - 1030	Introduction to PTA & RTA	
	When do we Perform PTA or RTA?	
1030 - 1045	Break	
	Basic Theory of Diffusion PTA/RTA	
1045 - 1200	The Basic Principles & Terminology Governing both Methods • Introduction	
	to Darcy's Law & the Equation of State Leading to the Diffusivity Equation	
	Basic Theory of Diffusion PTA/RTA (cont'd)	
1200 - 1300	The Principle of Superposition, Infinite-Acting Radial Flow, Wellbore Storage	
	& Skin & Pseudo-Steady State	
1300 - 1315	Break	
	PTA Methodology	
1315 - 1420	Methodology from the Simple Straight Line Horner to the Current Model-on-	
	the-fly Bourdet Derivative	
1420 - 1430	Recap	
1430	Lunch & End of Day One	
·		

Day 2

Duy L			
0730 - 0930	QA/QC The Quality Control Process before Making an Analysis		
0930 - 0945	Break		
0945 – 1130	Saphir Practical The Basic Saphir Features including the Interpretation Path of Load ● Edit ● Synchronizing ● Model ● Classical Methods ● The Derivative ● The Application to Field Examples		
1130 - 1230	Well Models Vertical Wells ● Skin ● Finite/Infinite Conductivity Fractures ● Limited Entry ● Horizontal Wells		
1230 – 1245	Break		
1245 - 1420	Reservoir Models Homogenous & Heterogeneous Models Behavior Including 2Φ, 2κ & Composite		
1420 - 1430	Recap		
1430	Lunch & End of Day Two		

Day 3

zuj c		
0730 – 0930	Boundary Models	
	Single Limit, Intersecting, Parallel Faults & Closed System • Typical Errors	
	Encountered when Diagnosing a Boundary Effect with an Illustration of	
	Superposition Effects • The Influence of Production Duration on the Analysis	
0930 - 0945	Break	
	Basic Gas Tests	
0945 – 1130	The Use of Pseudopressures & Multiple Period Analysis for Rate Dependant	
	Skin Includes an Isochronal Test Example	

1130 – 1230	IPR AOF The IPR AOF Options in Saphir & the Connection to the Amethyste WPA Module	
1230 - 1245	Break	
1245 - 1420	Test Design Test Objectives & How to Design a Test to Achieve Them	
1420 - 1430	Recap	
1430	Lunch & End of Day Three	

Day 4

Day 4	
_	RTA Methodology
0730 - 0930	Methodology from the Basic Empirical Methods including Arps & Fetkovich to
	the Current Modern Blasingame • Material Balance & Loglog Diagnostic Plots
0930 - 0945	Break
	Topaze Practical
0945 - 1130	The Basic Topaze Features including the Interpretation Path of Load • Edit •
	$Model \bullet p(q) \bullet q(p) \bullet Fast Model \bullet Application to Field Examples$
Basic Numerical PTA/RTA	
1130 - 1230	The Principle of the Linear (Single Phase) Numerical Model ● How to Build a
	Model ● Defining the Well Type ● Composite Zones ● Faults & Thickness
1230 – 1245	Break
1245 - 1345	An Introduction to Advanced Features
1345 – 1400	Course Conclusion
1400 – 1415	POST-TEST
1415 – 1430	Presentation of Course Certificates
1430	Lunch & End of Course

<u>Practical Sessions</u>
This practical and highly-interactive course includes real-life case studies and exercises:-
